

PORTFOLIO

David Geri

Hello,

I'm David Geri

Front-End Developer

I've worked on both professional and personal projects, gaining hands-on experience across various aspects of web development. I'm a fast learner, highly adaptable, and have strong communication skills with a deep curiosity for technology. I'm passionate about continuous learning and growth, especially in the world of modern web development.

Here, I'll be showcasing some of the projects I've worked on.

Advertisement Web

The image displays the TRIPAD BALI website across three devices: a desktop browser, a smartphone, and a tablet. The website's design is clean and modern, featuring a prominent header image of a coastal cliff. The desktop version includes a navigation bar with links to HOME, ABOUT, SERVICES, PACKAGE, GALLERY, and CONTACT. The smartphone and tablet versions show a "Get Started" button and a "Unleash Your Inner Explorer" tagline. The central focus is a section titled "Adventure Ideas" with three sub-options: "ATV Adventure", "Cycling", and "Dolphin", each accompanied by a small image and a brief description.

This website was created for a travel company to promote their services and travel packages. It serves as an online platform for showcasing destinations, highlighting tour options, and attracting potential customers through a clean and engaging design.

Booking Engine

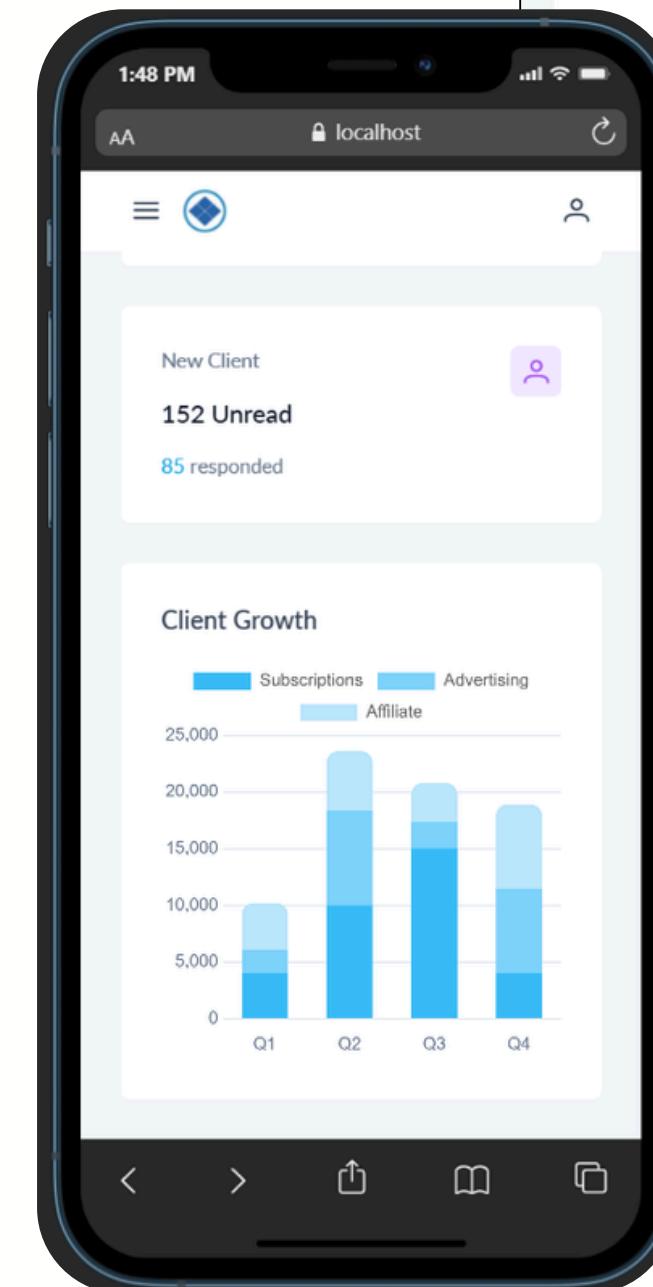

This project was built for a hotel that required a custom booking engine. It features a user-friendly interface where customers can browse hotel information, check room availability, and make reservations seamlessly.

The screenshot shows the Aruna Hotel booking engine. At the top, there's a header with 'Home' and 'Login' buttons. Below the header is a large image of the hotel building at sunset. The title 'The Aruna Hotel' is displayed with its address '12 Senggigi Street, Senggigi, Lombok' and a 5-star rating. A 'View More' button leads to a page with three photos of a bedroom: a double bed with white linens, a view from a window, and a bathroom. Below these are sections for 'Facilities' (Gym Area, Yoga Class, Basketball Court) and 'Area Accommodation' (Canggu Beach, Kuta Beach). A detailed description of the hotel follows, highlighting its luxury, contemporary design, and various amenities like a swimming pool, working space, and yoga studio. The 'Our Amazing Hotel' section includes a brief description and a 'Check Availability' button. The 'Key Features' section lists Beach Proximity, Wellness Facilities, Work-Friendly Spaces, and Private Meeting Rooms. The main content area shows two types of rooms: 'Single Rooms' and 'Deluxe'. Each room type has a photo, a star rating (5.0), and a table of room packages with Pax and Price columns. Buttons for 'Reserve' are present for each package. The 'Deluxe' room section includes a brief description of the room's features.

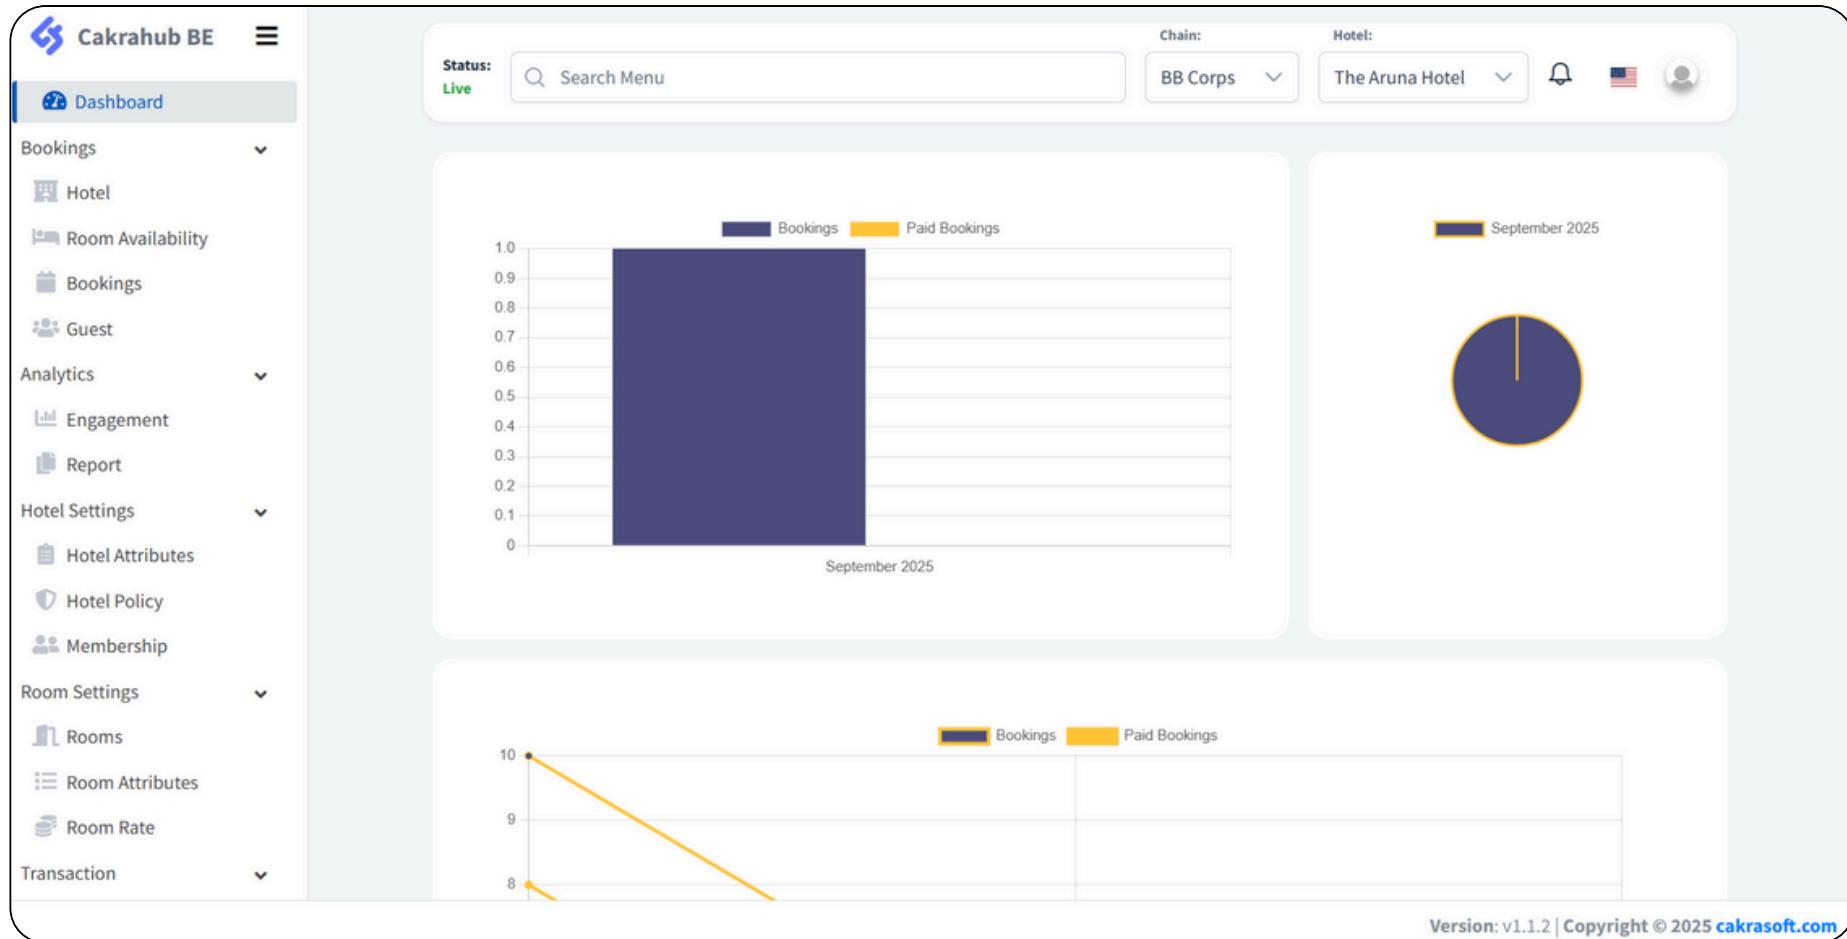

The screenshot shows the Aruna Hotel booking engine on a mobile device. The top status bar shows the time as 10:11 AM. The URL 'arunahotel.chsres.com' is visible in the browser. The main content area displays the hotel's name, address, 5-star rating, and a large image of the hotel's exterior and pool area. Below this are three photos of a bedroom and a '+1 Photos' button. A 'Facilities' section with a 'View More' button is shown. At the bottom of the screen are standard mobile navigation icons: back, forward, search, and others.

Administrator Page

This is an administrator page designed for a Property Management System (PMS). It provides a dashboard with analytics, data visualization, and management tools that allow admins to monitor performance, view statistics, and manage all essential system settings efficiently.

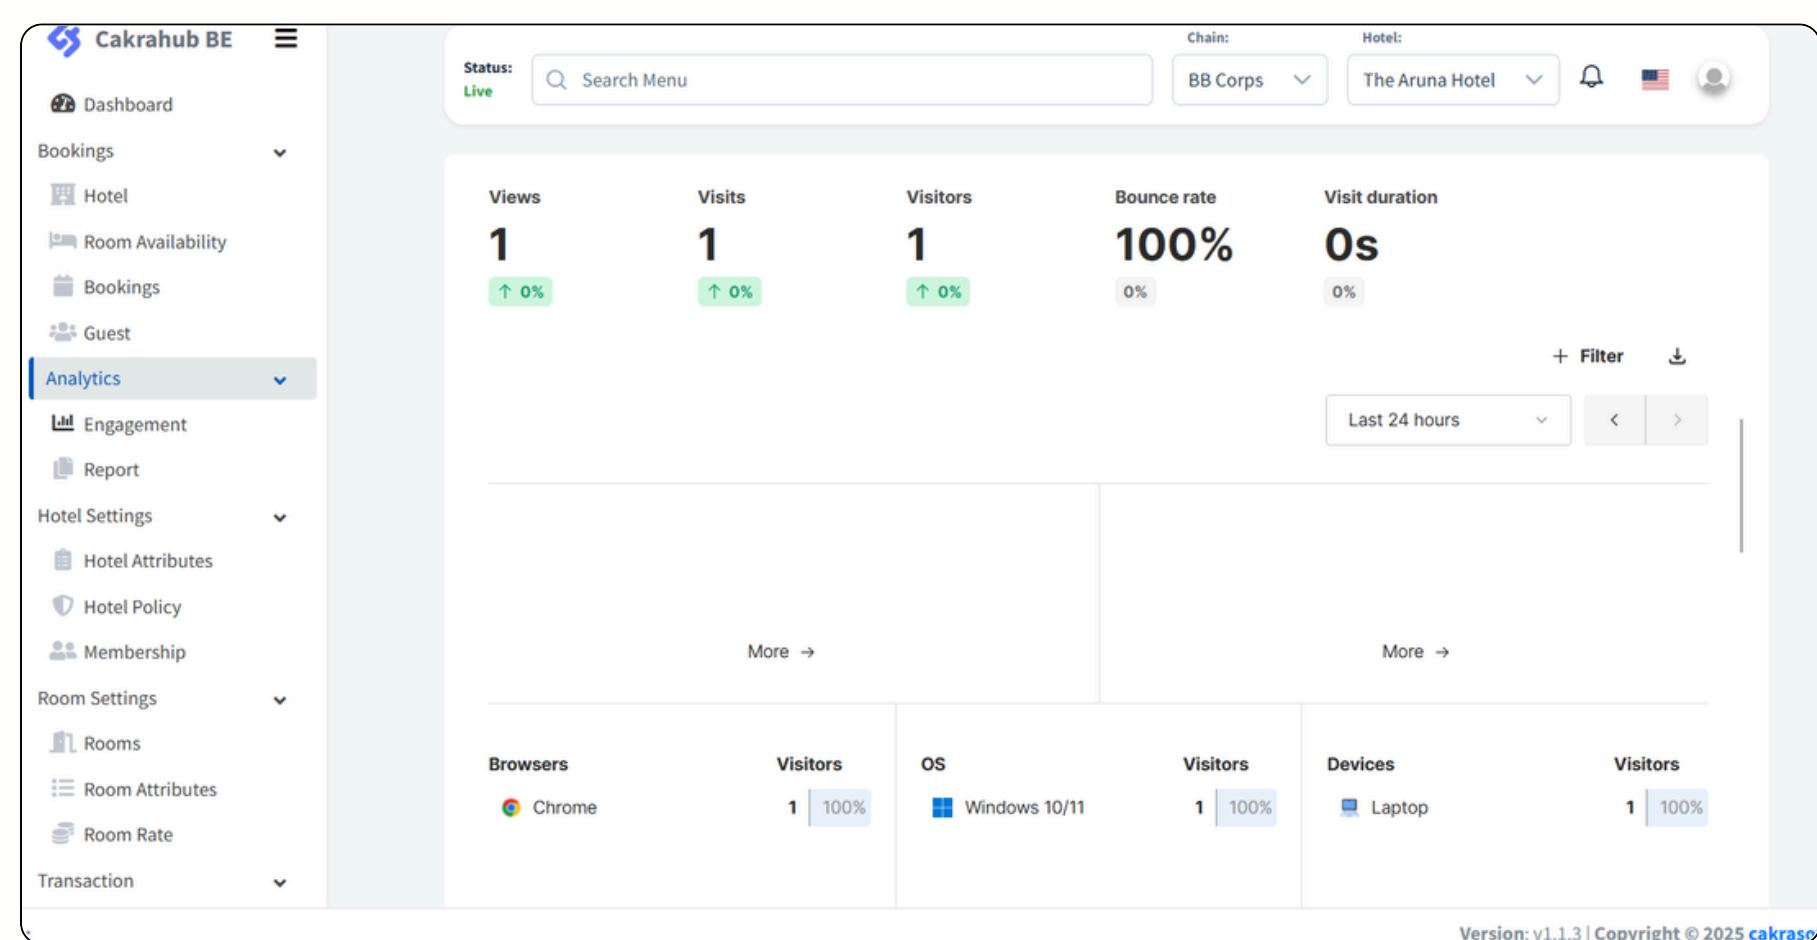

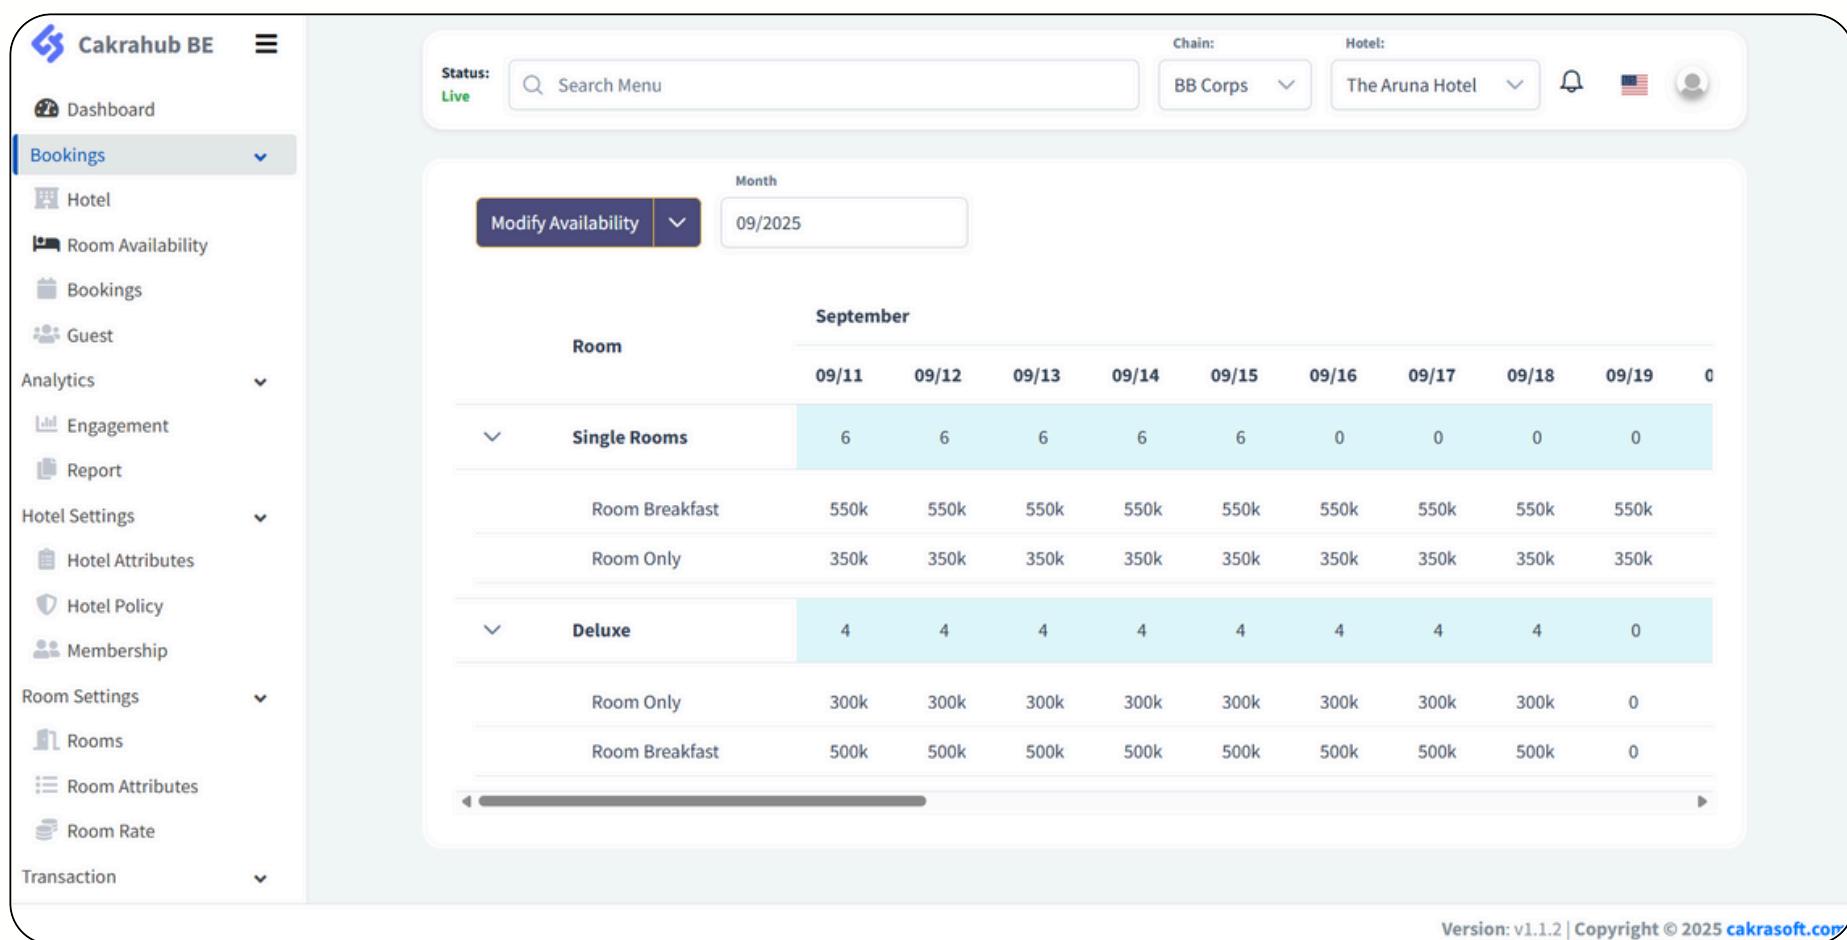

Two screenshots of the administrator page. The top screenshot is a desktop dashboard titled 'Cakrasoft Administrator'. It includes a sidebar with navigation links like HOME, USER & CLIENT, and SYSTEM & SERVICES. The main area has four cards: 'Total Client' (152, 24 new since last visit), 'Unpaid Invoice' (\$2.100, %52+ since last week), 'Expired Subscriptions' (28441, 520 newly registered), and 'New Client' (152 Unread, 85 responded). Below these is a 'Client Growth' chart similar to the one on the mobile screen. The bottom screenshot is another part of the 'Cakrasoft Administrator' interface, titled 'Client Access Management'. It shows a table with 9 rows of client data, each with columns for Id, Client Name, Email, Phone, Verified Status, Created At, and Actions. A search bar at the top right allows for keyword searching, and a blue 'Export to Excel' button is visible.

Booking Engine Administrator

This is an administrator platform built for hotels to manage their booking website. It allows hotels to customize the layout, images, and information, manage room availability, view website analytics, and handle many other configuration options — all in one place.

Property Management System

The image displays two screenshots of the Cakrasoft Property Management System. The top screenshot shows the 'Dashboard' page, which includes a sidebar with navigation links like 'General', 'Floor Plan', 'Room Availability', 'Room Type Availability', 'Room Allotment', 'Reservation', 'Folio', 'Housekeeping', and 'Lost and Found'. The main area features four cards: 'Occupancy' (0.00% / 0.00%, Actual: 0, Expected: 0), 'Vacant' (66 / 66, Actual: 66, Expected: 66, Yesterday: 66), 'Arrival' (0 / 0, Actual: 0, Expected: 0, Yesterday: 0), and 'Departure' (0 / 0, Actual: 0, Expected: 0, Yesterday: 0). Below these are 'Room Revenue' (0.00 / 0.00, Actual: 0.00, Expected: 0.00) and 'Average Room Revenue' (0.00 / 0.00, Actual: 0.00, Expected: 0.00). A large green donut chart in the center indicates 66 total rooms. The bottom screenshot shows the 'Report' section, featuring a sidebar with 'Cashier Report' and 'Report' selected. The main area includes a 'Select Report' tree view with categories like Hotel, Reservation, and Front Desk, and a 'Select Report Template' section with options for 'Preview Report', 'DRR Text', 'Customize Report', and 'Export To Excel'. A 'Date Range' section allows selecting a date range from 17/10/2025 to 18/10/2025, and a 'Filter' section is also present.

Cakrasoft is a comprehensive Property Management System developed collaboratively within our team. I was directly involved in designing and developing several core features, helping enhance both the system's functionality and overall user experience.

And that's just a glimpse of what I've worked on — there's plenty more where that came from! Thanks for checking out my work, and feel free to reach out if you'd like to see more.

Thank you
